PROJECT ABSTRACT SUBMISSION

COURSE: DATA SCIENCE – (24AD3107) A.Y. 2026 - 2027

TITLE OF THE PROJECT	"HealthScope" – A Full-Lifecycle Public Health Analytics & Risk Dashboard	
S. No.	University ID	Name
1	2420030400	Masuma Fathema
2	2420030588	Ch. Bhargavi Devi
3	2420030697	Dama Poojitha
4	2420030322	P. Kavya sai
Name of the Guide		Bonagani Prathusha

Abstract

HealthScope is a public health analytics and risk prediction platform designed to transform healthcare datasets into meaningful insights through data science and interactive visualization. The project uses publicly available datasets related to diseases such as diabetes or heart disease to analyze important health factors including age, blood pressure, glucose levels, BMI, cholesterol, and lifestyle indicators. The system performs data preprocessing, exploratory data analysis, statistical analysis, and feature engineering to identify patterns and relationships within the data. Multiple machine learning algorithms, including Logistic Regression, Decision Tree, and Random Forest, will be trained and evaluated using appropriate performance metrics. An interactive dashboard will present health trends, risk-factor analysis, model performance, and individual risk predictions in an accessible format. The proposed system aims to demonstrate how data-driven techniques can support early risk identification and improve understanding of public health patterns while providing a practical, user-friendly platform for healthcare analytics and informed decision-making effectively.
